

Clearly Superior

Quality. Capabilities. Service.

Liner Products is committed to providing reliable, high performance CIPP tubes through dedication to **quality**, continuous improvement, and innovation.

Our experience and industry leading manufacturing **capabilities** for both dry and resin saturated liners enable us to provide solutions for virtually any CIPP application.

Exceptional **service** can make the difference. Our commitment to our customers helps you better serve your clients and execute projects effectively.

Liner Products' proven record of delivering superior value is why leading cured-in-place pipe installers trust us for their most demanding projects.

Quality

Proprietary equipment and processes, consistent raw materials and attention to detail yield lining tubes designed and manufactured to deliver project success.

Built for Reliability

Our meticulous standards and ISO 9001 certified quality system make Liner Products the industry leader for CIPP tubes that consistently perform beyond your expectations.

Rigorous specifications and controls have been established throughout our supply chain to ensure quality for all material components.

Quality assurance testing is performed on site for materials, manufacturing processes, and finished tubes to ensure conformance with customer specifications. Our tubes comply with industry standards, including ASTM D5813, ASTM F1216, and ASTM F1743.

Engineered for Performance

Liner Products CIPP tubes meet wide ranging performance demands for liner size, installation technique, and pipe and site conditions.

We offer a variety of felt configurations to optimize overall performance based on diameter, thickness, and project specific needs.

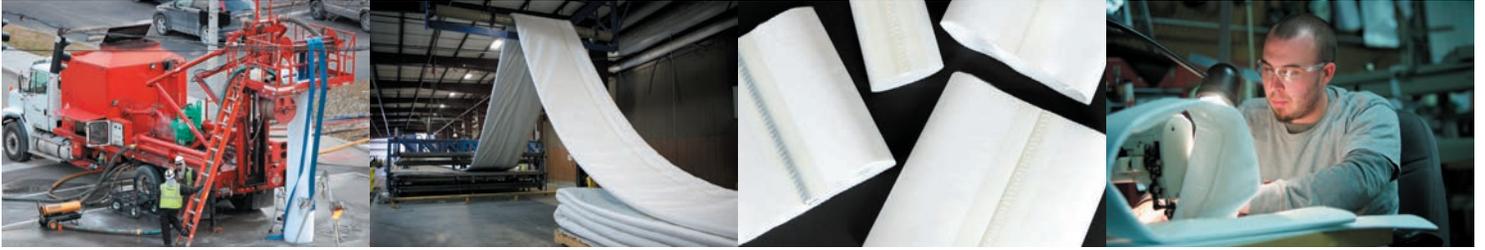

Our tube coatings have been developed for versatility, durability, and ease of installation.

We use our experience to design and manufacture a tube, or even a tube system, to meet unique project requirements.

Capabilities

Liner Products' industry leading product line and custom manufacturing capabilities leverage the versatility of cured-in-place pipe for a variety of applications.

Installation Method

We manufacture liners for the commonly used installation methods, including inversion, pull-in and inflate, and traditional pull-in-place. Tubes may be designed for curing with hot water, steam or ultraviolet (UV) light.

Tube Sizes

Tubes can be produced in diameters from 3" to 120" and thicknesses up to 85 mm. Tube thicknesses are available in increments of 0.5 mm to give you precise control over liner thickness—saving resin, time and money.

Construction

Tubes are available with heat bonded or stitched seams, depending upon diameter and tube thickness. An extensive selection of felt and coating combinations provides options to best meet the needs of your operations and project requirements.

Custom Tubes

Liner Products can accommodate pipe changes and special design conditions with fully customized tubes—including diameter transitions, thickness changes, fiber reinforcements and onsite splicing for very large tubes.

Service

Our experienced professionals strive to consistently exceed your expectations for responsiveness, delivery and support.

Lead Times

We understand the importance of prompt and reliable delivery. Our short lead times and ability to expedite urgent orders keep your operations flexible, cost effective, and responsive to your clients' needs.

Logistics

Logistics management from order to delivery is integral to our quality system. Our logistics experience is especially important for time sensitive deliveries such as emergency situations and over-the-hole wet outs. Our strategically located facilities allow for minimized transit times—usually one or two days for most of the U.S. and Canada.

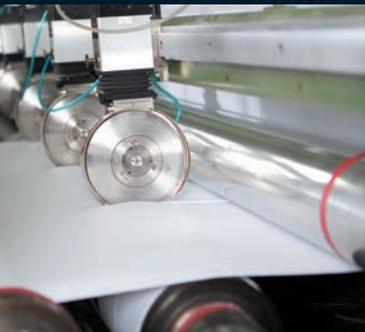

Technical Support

Our management and technical teams have extensive experience in every aspect of CIPP manufacturing and installation. We work closely with our customers to develop solutions for special conditions and requirements, and provide support from order to installation.
